**ABSTRACT:**

The productivity of labour force is an important factor that affects on the production level of economic sectors. This paper investigates on the changes in the productivity of labour in Iran. To this end, the changes in the production level of the economic sectors are decomposed into some devices contain the labour productivity. Thus the role of labour productivity on production level is revealed. The national input-output tables for the years 1986 and 2001 are employed. It is expected the results of the paper can demonstrate the changes in the labour productivity due to different investment to improve their capabilities.
