KEYWORDS: CAPITAL ; SERVICES ; SUPPLY ; USE ;

PAPER CONFERENCE CODE: 26

FULL PAPER IN CD?: YES

ABSTRACT:

The issues of capital services were deeply discussed when the revision of SNA 1993 and ESA 1995 was prepared. The inclusion of capital services into national accounts has a lot of advantages relating to the valuation of capital stocks and productivity measurement. If capital services for other non-market producers were estimated and the cost method was changed by substituting of consumption of fixed capital by capital services, the value of output and the value of government consumption expenditures would be significantly influenced. There are important impacts on the total level of aggregates and industrial composition of output and value added as well. Therefore the figures in supply and use tables and symmetric input-output tables will be influenced by capital services for non-market producers because the current concept, when net operating surplus of other non-market producers equals zero would be changed.
