ABSTRACT:

Guangdong Province is the earliest area of China's Reform and Opening Up , is also one of the quickest area of economic development. By that development of 30 years , the economic strength of Guangdong Province is being strengthened constantly , some main economic indicators are surmounting Taiwan area gradually. With 2002 and 2005 input-output table of Guangdong Province , we analyzed the economic structure and industrial connection in Guangdong Province and analyzed their change. With 2001 and 2004 input-output table of Taiwan area , we analyzed the economic structure and industrial connection in Taiwan area and analyzed their change. Step forward , we comparatively analyzed economic structure and industrial connection of Guangdong and Taiwan and comparatively analyzed their change and difference. These economic structure include industrial structure , final use structure , export structure , import structure , added value structure of each industry and so on. By comparative analysis , we were able to know industrial structure , industrial development level , foreign trade , industrialization developing stage , industrialization developing level etc. of Guangdong and Taiwan.
