

Evaluation of the tourism activity effects in Andalusia. An application of the Andalusian official SAM (MCSAN05)

Topic: Impact analysis 2

Author: Laura Moniche

Co-Authors: Barbara Diaz, Mercedes Cerquella

The main goal of this article is to introduce the first official regional Social Accounting Matrix of Andalusia for 2005 (MCSAN05) and use it to analyse the importance of the effects that the tourism has in Andalusia. We will quantify the consequences of the non residents' consumption expenditure in Andalusia over diverse socioeconomic aspects in this region. The main contributions of this analysis are: the knowledge of the effects over the wage of the employees taking into account their educational level and gender and over the disposable income of the households (classified by mean source of income), of the financial and non financial corporations and of the public sector.

Keywords: Impact Analysis, Social Accounting Matrix, Regional Analysis, SAM Multipliers, Disaggregation of Household Sector, Tourism.
