

Comparing constant and current price multipliers for Belgium

Topic: Supply, Use and IO Tables: Methodology and Comparability

Author: Bart Hertveldt

Co-Authors: Bernhard Michel, Caroline Hambÿe

This paper first describes the methodology that has been followed to deflate a consistent time series of Belgian SUT and IOT for the period 1995‐2007. Based on this series, the evolution of final demand multipliers calculated on current price and constant price tables are then compared. This analysis is made at a very detailed industry level.
