

Economic Futures: A Session in Honor of Emilio Fontela (1938-2007)

Emilio Fontela was deeply concerned with the major global problems of our times and how they might be resolved. These concerns took several forms: his socioeconomic analysis including his work with the Club of Lisbon, his immersion in futures research and scenario formulation, and his interest in meso-level input-output models of the world economy for the analysis of scenarios. In this session we pay tribute to his pioneering vision in 3 papers developing several of these strands.
